Using AI on assignments

Lesson 5 notes. Fill in the blanks as we go.

Why disclose?

You cite a book to give _____, so others can _____, and to be _____.

The same reasons apply to AI. AI can also be wrong, so your reader needs to know which parts to _____.

Three AI Use Tiers

Tier	What it means	Example
Human-Only	No AI tools for this work. Your own thinking, your own words.	An in-class quiz; a personal reflection
AI-Assist	You may use AI for a step the teacher names. Check what it gave you, and disclose it.	Using the Library Assistant to find books for a research project
AI-Optional	You may use AI more freely. You still disclose it and check it. You're responsible for everything you turn in.	A practice activity on how AI answers compare to sources

Your _____ sets the tier for each assignment. It can be different from class to class. When in doubt, _____.

The tier sort

Write down one assignment we sorted, and why you chose its tier.

Good checking is specific

Too vague	Specific
"I looked it up."	"I found it on the shelf at 551.21."

My disclosure line

AI use: I used _____ (tool) to _____ (what for) on _____ (date). I kept _____ and changed _____. I checked it by _____ _____.

Partner check. Does the line say:

- □ what tool?
- □ what for?
- □ what was kept or changed?
- □ how it was checked?

An example

AI use: I used the Library Assistant to find books about volcanoes on March 3. I kept two of the books it suggested and skipped one that was about earthquakes. I checked it by finding both books on the shelf and reading their tables of contents.

When the assignment is Human-Only, the line is: *AI use: none.*

Take it with you

- **The tier belongs to the assignment**, not to you. Check it each time.
- **Disclosing isn't confessing.** It's what good researchers do, the same as citing a book.
- The tiers and the line apply to **every AI tool**, including ones you use at home.
- **You're responsible** for what you turn in.

Check yourself

1. What are the three tiers?
2. What are the four parts of a disclosure line?
3. If the assistant sounds really sure, is the answer right? How would you check?
