Follow the Citation

Lesson 2 notes. Fill in the blanks as we go.

The anatomy of an answer

Part	Whose words?	Does it have Citations?
1. The overview	The model's _____ words	No, on purpose
2. Books in our library	Our _____, so they can't be made up	Yes: title and call number

What's in a Record

A **Record** describes a book. It tells you the:

_____, _____, _____, _____, and _____.

A Record is not the _____. It doesn't say whether the book is on the shelf right now.

Two different sentences

"The assistant said it" means _____ _____

"The Record says it" means _____ _____

The trail

Citation, then **Record**, then **call number**, then **shelf**.

How to read a call number

- **Nonfiction** has a number. Find the hundreds, then the exact number, then the letters.
- **FIC** is fiction, by the author's last name.
- **B** is biography, by the name of the person it's about.
- **E** is picture books.

> **If the book isn't there:** the Record told you we own it. The shelf told you where it is today. Those are different questions, and the assistant can't answer the second one.

Our Citation trail

Question	What the answer claimed	Citation title	Call number	On shelf? (yes / checked out / not there)	Does the book match?

Take it with you

- Every answer has **two parts**: the overview, and Books in our library.
- A **Citation** gives a book's title and call number. A **Record** describes the book.
- A Citation proves the book is **real** and that we own it. It doesn't prove the overview is right.
- The one line about why a book was picked is the model talking. Check it against the book.

Check yourself

1. Which part of an answer can't be made up? Why?
2. A Citation says 551.21. What do you do next?
3. Why isn't a list of real books proof that the overview is right?
